

NOTICE

On March 4, 2008, the Midwest Independent Transmission System Operator (MISO) filed documents with the Federal Energy Regulatory Commission (FERC), including a Western Markets Proposal contained in a new Module F of MISO's Open Access Transmission and Energy Markets Tariff. Module F has three major parts that correspond to the three types of coordination services proposed in the filing: Part I - Reliability Coordination Service; Part II - Interconnected Operations and Congestion Management Service; and Part III - Market Coordination Service.

Western's Upper Great Plains Region (UGPR) Power Marketing staff is evaluating MISO's Western Markets Proposal and its possible impacts to UGPR customers. UGPR plans to update customers on its decision process, including sending summary information and holding an information meeting. A meeting has been scheduled for Wednesday, April 16, 2008, in Sioux Falls, South Dakota.
